

Idenprotect Go

Secure Your Enterprise Browsing

In hybrid work environments, where data resides both on-premise and in the cloud, traditional security measures like VPNs and consumer-grade browsers are no longer sufficient.

Idenprotect Go is the secure enterprise browser designed to protect your organisation from web-based threats, isolate sensitive data, and empower your workforce with a seamless and productive browsing experience.

With Idenprotect Go, you can embrace Zero Trust principles, ensuring that every access request is verified and authorised, regardless of user location or device.

Key Features and Benefits

Being natively Kerberos aware, which the vast majority of mobile browsers are not, Idenprotect Go can provide seamless authentication to secured resources including Integrated Windows Authentication and MTLS. Furthermore, Idenprotect Go leverages Intune for core functionalities, including group and user policy enforcement, ensuring a secure and managed browsing environment.

Secure enterprise browser

Provides a secure enterprise browsing environment with data isolation to prevent web-based threats and protect sensitive information.

Inbuilt phishing-resistant authentication

Offers phishing-resistant, passwordless authentication, simplifying user experience and enhancing security by eliminating password vulnerabilities

Zero Trust Security

Aligns with Zero Trust principles, ensuring continuous verification and authorisation for every access request. Provides granular access controls and enforces least privilege access.

Threat Prevention

Prevents malware downloads, phishing attacks, and other web-based threats. Protects your organisation from data breaches and reputational damage.

Granular Access Controls

Provides granular control over user access to websites and applications. Enforces existing network security policies and prevents unauthorised access to sensitive data.

Centralised Management

Simplifies IT administration with centralised management of users, devices, and security policies. Provides easy troubleshooting due to centralised logging functionality.

How It Works

Idenprotect Go establishes a secure browsing environment by first validating the user's identity through biometric authentication, providing built-in Zero Trust Network Access. Once the user is verified, Idenprotect Go creates a secure tunnel – a non-VPN based connection – between the user's device and the enterprise network.

This tunnel encrypts all traffic, protecting sensitive data from web-based threats and ensuring secure access to corporate resources, regardless of whether they are located on-premise or in the cloud.

Use Cases

Idenprotect Go enhances protection against web-based threats such as malware downloads by ensuring that all browser traffic is routed through the organisation's existing web controls. This approach strengthens security and safeguards sensitive data by leveraging the organisation's established security infrastructure

Idenprotect Go facilitates secure access to cloud applications by ensuring that all traffic is routed through the organisation's network. This allows organisations to leverage source IP address and other network-based access controls to ensure that only authorised users can access sensitive data, regardless of location or device.

Enabling BYOD Policies
Idenprotect Go enables secure Bring Your Own Device (BYOD) policies, allowing employees to use their personal devices for work without compromising security.

Isolating Sensitive Data
Idenprotect Go isolates sensitive data to meet compliance requirements and prevent unauthorised access or data exfiltration

Technical Specifications

Device Compatibility: Compatible with iOS and Android devices

Management Console: Centralised user management and policy enforcement, with detailed audit logs and reporting.

Authentication Protocols: PKI/x.509 certificate-based authentication with native support for MTLS and IWA (Kerberos) authentication, enhanced by Multi-Factor Authentication.

Deployment Options: Flexible deployment options (on-premises, cloud, or hybrid) and scalable architecture to support enterprise deployments.

Security and Compliance

Idenprotect Go is designed with security as its core principle, providing robust protection against modern cyber threats.

Threat Isolation

Isolates web-based threats, preventing them from accessing sensitive data or credentials.

Data Leakage Prevention

Granular access controls and data isolation prevent unauthorised access and data exfiltration, even on unmanaged devices.

Compliance

Idenprotect Go assists organisations in meeting compliance requirements.

Phishing-Resistant, Passwordless Secure Access for Global Wealth Manager Giant with Idenprotect

A leading international investment and retail bank successfully addressed its secure enterprise browsing challenges by implementing Idenprotect Go. The solution seamlessly integrated with the bank's hybrid environment, providing robust security and a frictionless user experience.

Idenprotect Go's passwordless, phishing-resistant approach, combined with centralised management capabilities, streamlined IT operations and enhanced the bank's overall security posture.

IIB Customer Success Story: Secure Browsing with Idenprotect Go

A leading international investment and retail bank sought to enhance security and user experience by providing seamless access to corporate data across a hybrid environment.

Idenprotect Go, a secure enterprise browser, addressed their challenges, offering phishing-resistant, passwordless access and integrating seamlessly with their existing infrastructure.

The solution resulted in improved security, streamlined IT operations, and enhanced user satisfaction.

Idenprotect is a leading cybersecurity company specialising in phishing-resistant, passwordless authentication and secure browsing solutions. We empower organisations of all sizes to eliminate password risks, streamline operations, and foster a productive, secure digital environment. Our mission is to set the standard for exceptional user experience by connecting people to data seamlessly and securely. We are committed to innovation, excellence, and a customer-centric approach.
