

Idenprotect for Windows

Secure Passwordless Access

Idenprotect for Windows provides a true Windows Hello alternative, delivering secure, phishing-resistant, and passwordless access to Windows devices.

For organisations struggling with Windows Hello complexity or seeking to avoid costly authenticator upgrades, Idenprotect for Windows offers a streamlined, secure solution.

Key Features and Benefits

Passwordless Windows login

Enables users to log in to Windows in a phishing-resistant and passwordless way

Secure offline access

Provides a secure out-of-band offline access mechanism that cannot be easily bypassed.

Virtual Desktop Infrastructure (VDI)/ Remote Desktop Protocol (RDP) support

Supports passwordless access in virtual desktop environments

Log on as support

Enables authorised personnel to log on to Windows with elevated privileges using Idenprotect.

How It Works

Idenprotect for Windows provides phishing-resistant and passwordless access to Windows, offering a true Windows Hello alternative. When a user attempts to log in, Idenprotect for Windows verifies their identity using the biometric authenticator on their mobile phone.

This out-of-band authentication enhances security by ensuring that even if the Windows machine is compromised, the authentication remains secure.

Use Cases

Idenprotect for Windows provides phishing-resistant and passwordless access to Windows, offering a true Windows Hello alternative. When a user attempts to log in, Idenprotect for Windows verifies their identity using the biometric authenticator on their mobile phone.

Enhanced Security for Windows Devices

Replaces vulnerable passwords with phishing-resistant, passwordless authentication, reducing breach risk and securing Windows access.

Simplified Access for VDI/RDP Environments

Streamlines virtual desktop and remote server access, improving user experience and productivity with secure, simplified logins.

Enhanced Security for Windows Devices

Secures and simplifies granting elevated privileges for administrative tasks, providing a secure and auditable access method.

Technical Specifications

Supported Operating Systems:

All supported Windows deployments, desktop and server.

Authentication Method:

Biometric authentication via Idenprotect Passport.

Offline Access:

Secure out-of-band offline access mechanism (OTP).

Integration:

Idenprotect's own credential provider

Security and Compliance

Phishing-Resistant and Passwordless Authentication

Eliminates passwords, the primary target for phishing, reducing credential theft and account takeover.

Out-of-Band Authentication

Authenticates users via a separate device, securing logins even if the Windows device is compromised.

Public Key Infrastructure (PKI) Security

Encrypts authentication credentials and data using proven PKI, ensuring login integrity and confidentiality.

Biometric Security via Idenprotect Passport

Leverages Idenprotect Passport for strong, user-friendly biometric authentication (fingerprint/facial recognition)

Ready to enhance your organisation's security with Idenprotect for Windows?

Contact us to learn more about Idenprotect for Windows and how it can secure your Windows environment.

A forward-thinking enterprise prioritised both user experience and security by implementing Idenprotect for Windows

Recognising the threat of spear-phishing and the widespread use of compromised passwords, they sought a solution that would eliminate passwords without adding complexity for their users.

Idenprotect for Windows provided a seamless, secure login experience, enhancing security and improving productivity across the organisation.

Idenprotect is a leading cybersecurity company specialising in phishing-resistant, passwordless authentication and secure browsing solutions.

We empower organisations of all sizes to eliminate password risks, streamline operations, and foster a productive, secure digital environment.

Our mission is to set the standard for exceptional user experience by connecting people to data seamlessly and securely.

We are committed to innovation, excellence, and a customer-centric approach.
